Co-funded by
the European Union

This company started in 2015 by Jean Paul Ngomayamahoro with the mission of promoting the good agriculture practices to coffee farmers in the zone of Mountain coffee washing station and support those farmers to improve both quality and production by using organic manures and chemical fertilizers.

Mountain Coffee washing station has the capacity to process 1400 tons of cherries the equivalent of 9 containers of green coffee.

Our believing is that everyone plays his role and achieve his responsibility to reach the goal which says that “good taste of the cup comes from effort made by everyone in coffee value chain; Farmers, processors, Exporters and roasters to satisfy needs of consumers.

Mountain Coffee provides seedlings to the farmers with the aim of boosting production to be able to reach the washing station capacity.

Our vision is to be the first preferable and shine brand locally and internationally.
